# Creating IBM i Client Partitions Using Virtual Partition Manager

## Introduction

This IBM® Redpaper™ provides steps, considerations, limitations, and links to information regarding the creation of IBM i Client Partitions using the third generation of Virtual Partition Manager (VPM).

Beginning with IBM i 7.1, the Virtual Partition Manager was enhanced and now allows you to create and manage Linux partitions and IBM i partitions without the use of the Hardware Management Console (HMC), Systems Director Management Console (SDMC), or Integrated Virtualization Manager (IVM). It involves the use of VPM and the new support for Ethernet layer-2 bridging between a physical Ethernet adapter and a virtual Ethernet adapter that provides the ability for an IBM i partition to share a physical Ethernet connection with other partitions in the same system.

The intended audience for this Redpaper publication is advanced system administrators.

## Virtual Partition Manager Enhancements to Create IBM i Partitions

The Virtual Partition Manager (VPM) is a partition management tool that supports the creation of partitions that use only virtual input/output (I/O) and does not require the Hardware Management Console, Systems Director Management Console, or Integrated Virtualization Manager. In addition to being able to manage Linux guest partitions, the VPM now supports creation and management of IBM i partitions.

This enhanced VPM function is available on IBM POWER6® and IBM POWER7™ IBM Express Servers™ that do not have an external management console. With this enhancement to IBM i 7.1, the ability to create up to four IBM i partitions are enabled in VPM. Client IBM i partitions, which are created with VPM, use virtual I/O to connect back to the IBM i I/O server partition to access the physical disk and network. VPM in the IBM i I/O server

partition creates the virtual SCSI and virtual Ethernet adapters for the client partitions. The user can then use Network Storage Spaces (NWSSTG) and Network Storage Descriptions (NWSA) in the IBM i I/O server partition to define the storage for the client partitions. Tape, disk, and optical are allowed to be virtualized to the client partitions.

The IBM i Client partitions can be IBM i 7.1 or IBM i 6.1 with either 6.1 or 6.1.1 machine code. A PowerVM license is required to partition the server using VPM.

## Ethernet Layer-2 Bridging

The latest IBM i V7R1 Technology Refresh has new support for Ethernet layer-2 bridging between a physical network and the IBM Power Systems™ virtual Ethernet. Using layer-2 bridging, one Ethernet port in an IBM i partition can provide network access for other logical partitions on the same platform. This cooperation is similar in functionality to the Shared Ethernet Adapter (SEA) support provided by a Power Systems Virtual I/O Server (VIOS) partition.

This system works by putting two Ethernet adapters (one physical, one virtual) into a mode where they can receive traffic that is not specifically destined for their address and selectively sending those frames onto the other network according to the IEEE 802.1D standard ("bridging" the frames). Because of this, frames transmitted by virtual Ethernet adapters on the same vlan as the bridging virtual Ethernet adapter can be sent to the physical network, and frames from the physical network can be received by adapters on the virtual network.

## Preparing for Ethernet layer-2 bridging

To get started with the configuration of Ethernet layer-2 bridging, you must select a physical Ethernet resource to use for layer-2 bridging. Here are the general requirements that an Ethernet resource must meet to use Ethernet layer-2 bridging:

- ▶ The system must be running with the newest level of PTF Groups, Technology Refresh Groups, and Cumulative Package.
- ▶ Any Ethernet resource that supports line speeds of 1Gbps or greater is supported, except for Host Ethernet Adapter (HEA) resources. Host Ethernet Adapter already supports the ability for multiple partitions to use a single physical port by assigning each partition a logical port.
- ▶ It must not be in use by any varied-on line description, LAN console, or remote support.
- ▶ An aggregate line description can also be used to bridge traffic to the external network.
- ▶ A virtual Ethernet resource must be available for layer-2 bridging with access external network enabled:
  - If using a Hardware Management Console, a virtual Ethernet adapter must be created for the desired VLAN ID, and the Access external network box must be checked to indicate that this virtual Ethernet adapter will be used to bridge traffic to the physical network.
  - If using the IBM i Virtual Partition Manager, the virtual Ethernet adapter is automatically created with the ability to access the external network.
- ▶ A unique alphanumeric name (up to 10 characters) must be chosen for the bridge identifier.

**Note:** Use the selected Ethernet resources only for layer-2 bridging (not for IBM i TCP/IP configuration). Even when you can use it for TCP/IP, there is significant processing overhead for any host traffic that uses bridged resources.

## Configuring Ethernet layer-2 bridging

In this section, we provide the general configuration steps that you must do to get Ethernet layer-2 bridging up and running:

1. Create an Ethernet line description for the physical Ethernet resource, and set its Bridge identifier (BRIDGE) to your chosen bridge name.
2. Create an Ethernet line description for the selected virtual Ethernet resource, and set its Bridge identifier (BRIDGE) to the same bridge name.
3. When both line descriptions are varied on, traffic is bridged between the two networks, and any other partitions with virtual Ethernet adapters on the same VLAN as the new virtual Ethernet resource can access the same network as the physical Ethernet resource.

## Common errors

CHGLINETH cannot be used to change the Bridge identifier of a line description that was created prior to the latest TR. If equivalent behavior is desired:

1. Use the Copy option on WRKLIND to make a temporary copy of the line description.
2. Delete the existing line description.
3. Use the Copy option again on WRKLIND to replicate the original line description, specifying the desired Bridge identifier.
4. Delete the temporary line description.

No more than one physical Ethernet adapter's line description with a given Bridge identifier can be varied on at the same time. Likewise, no more than one virtual Ethernet adapter's line description with a given Bridge identifier can be varied on at the same time. An error is returned when trying to vary on any more line descriptions with that Bridge identifier, indicating that the configuration is in error.

For a given bridge, select one physical Ethernet line description and one virtual line description to be bridged. If more than one bridge is required, use a different Bridge identifier for each additional bridge.

As previously mentioned, the selected virtual Ethernet resource must be marked as allowing access to the external network. If an incorrect virtual Ethernet resource is selected, an error is returned when trying to vary on its line description, indicating that the selected resource cannot enable promiscuous mode. Create a virtual Ethernet resource that can be used to access the external network.

## Managing Ethernet layer-2 bridging

While an Ethernet line description is varied off, its Bridge identifier (BRIDGE) can be changed to a different name or to \*NONE, indicating that it is not to be used for bridging.

**Note:** In IBM i V7R1, an Ethernet line description's Bridge identifier is not visible from DSPLIND. Use the CHGLINETH command and prompt to see the Bridge identifier for an Ethernet line description.

## Preparing Your System for the Virtual Partition Manager

This section provides step-by-step instructions about how you can remove logical resources from IBM i using the Virtual Partition Manager, in preparation for defining new IBM i partitions. With your new Power System, by default, the IBM i partition currently owns all of the processor, memory, and I/O resources.

You can invoke the Virtual Partition Manager either through Dedicated Service Tools (DST) or System Service Tools (SST) tasks. The advantage of using SST is that you can bring your Power System to full operational mode rather than having to do your partition definitions in a restricted state where the rest of the operating system has not started, and users cannot use the system.

After you define the partitions, a system IPL is required to complete the removal of resources from IBM i.

## Configuring an IBM i Client Partition using VPM

The following procedure gives you a general idea of what it takes to configure a new IBM i Client Partition using Virtual Partition Manager (VPM):

1. From the IBM i command line type the command in Figure 1.

```
STRSST
```

Figure 1 STRSST command

2. Press Enter. Sign on with a service tool user profile that at least has authority to System partitions - operations, System partitions - administration, Hardware service manager, and Start Service Tools functions.
3. Select option **5**, Work with system partitions, and press Enter. If this is the first time, you will see an initial information panel similar to Figure 2.

```
Logical Partitioning Environment Supported
System:  ZD8AP1
Virtual Partition Manager is supported. The system is in a
state that does allow this operating system to partition the
server. Refer to the Virtual Partition Manager documentation
for more information.
Press ENTER to confirm using Virtual Partition Manager to
Partition the server.
```

Figure 2 Logical Partitioning Environment Supported panel

4. Press Enter. The Work with System Partitions panel is displayed, as shown in Figure 3.

```
Work with System Partitions                               System:  ZD8AP1
Attention: Incorrect use of this utility can cause damage
to data in this system.  See service documentation.

Number of partitions . . . . . : 2
Partition release . . . . . : V7R1M0

Partition identifier . . . . . : 1
Partition name . . . . . : ZD8AP1  *

Select one of the following:

    2. Work with partition status
    3. Work with partition configuration
    4. Clear configuration data
    5. Create a new partition

Selection
-
F3=Exit  F12=Cancel
```

Figure 3 Work with Systems Partitions panel

5. Select option **3**, Work with partition configuration, and press Enter. The Work with Partition Configuration panel is displayed, as shown in Figure 4 on page 6.

```

Work with Partition Configuration
System: ZD8AP1

Available processor units . . . . . : 2.90
Available memory (MB) . . . . . : 3808
Memory region size (MB) . . . . . : 32

Type option, press Enter.
  1=Display  2=Change  9=Delete

Partition
-----Processor-----
Opt  ID  Name      Total  Units  Uncap  Weight  Memory
      1  ZD8AP1     1      1.00   1      Med    2048
-    2  XPF71     1      0.10   1      Med    1536
      WLM  1  2  3  4
      2  1  2  2  2
      2  3  2  2  2

F3=Exit  F5=Refresh  F11=Work with partition status  F12=Cancel

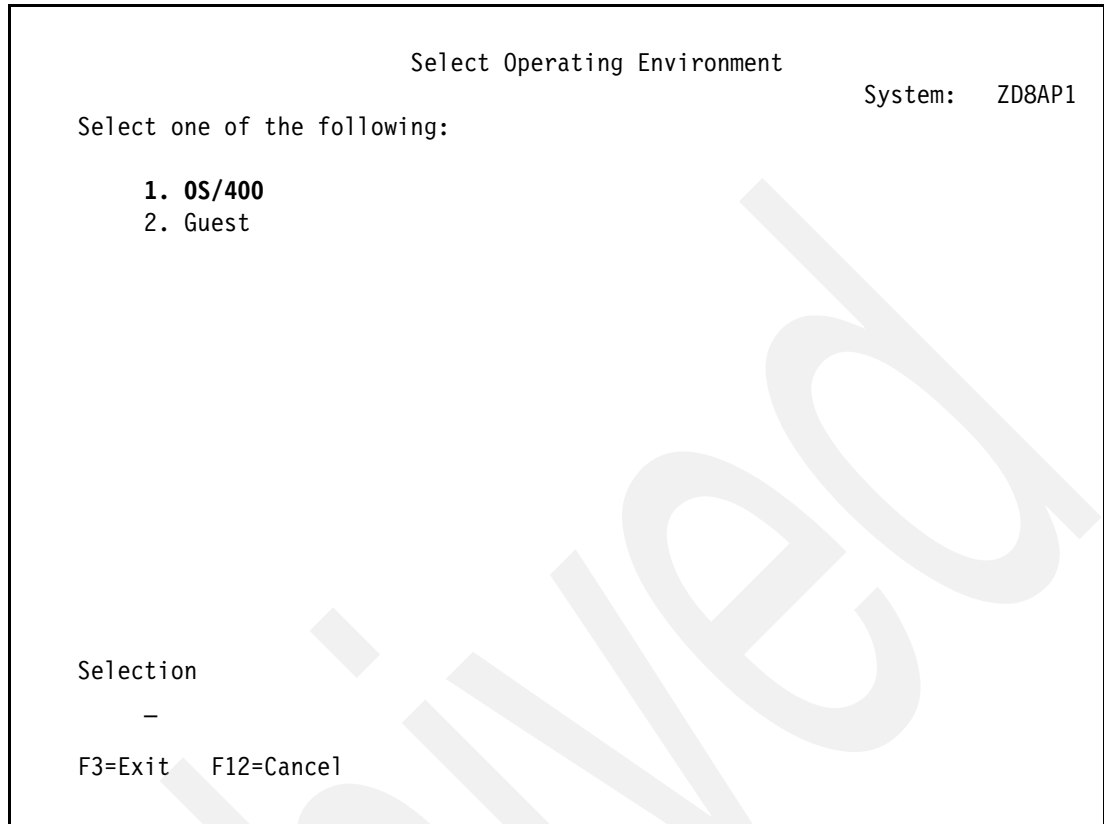

```

Figure 4 Work with Partition Configuration panel

- If from the previous panel you perceive there are not enough resources (processor units and memory, highlighted) to define a new IBM i partition, edit your host partition (Partition ID 1) to remove some resources, and make them available for the guest partitions.

**Note:** Considering that Virtual Partition Manager does not support dynamic movement of resources, you might want to define your partitions as uncapped partitions to automatically assign unused processing units to a partition that needs the resources.

- Press F3. Select option 5, Create a new partition, and press Enter. The Select Operating Environment Panel is displayed, as shown in Figure 5 on page 7.

*Figure 5 Select Operating Environment panel*

8. Select option **1**, OS/400®, and press Enter. The Create New Partition Panel is shown. Complete the fields (highlighted), as shown in Figure 6 on page 8.

```

                                Create New Partition
                                System:  ZD8AP1

Complete blanks, press Enter.

- System Unit                                     +        78A0-001  U78A0.001.DNWFR27  FR01
- Virtual Backplane                             + <      268C-001  U9409.E8A.HV80001  P21
- Disk Unit System                               +                                               DE01
- Tape Unit                                       6380-001                                               SD001

F3=Exit  F5=Refresh  F6=Print  F8=Exclude non-reporting resources
F9=Reserve frame space  F10=Non-reporting resources
F11=Display SPCN system information  F12=Cancel  F13=Unresolved locations

```

Figure 8 Packaging Hardware Resources panel

13. Select option **9**, Hardware contained within package, next to Virtual Backplane, and press Enter. The details for the Virtual Backplane are displayed. Page down until you find the first resource with a location code of **V1-C330**, as shown in Figure 9 on page 10.

**Note:** Every time you create an IBM i Client Partition using Virtual Partition Manager, 3 vSCSI adapters are created. The C label (C330) can be dissected: The first digit is the LPAR ID (3). The second and third digits represent the vSCSI identifier (30, 31, and 32). The vSCSI ID ending in 0 (30) is the Load Source and Alternate Restart Device.

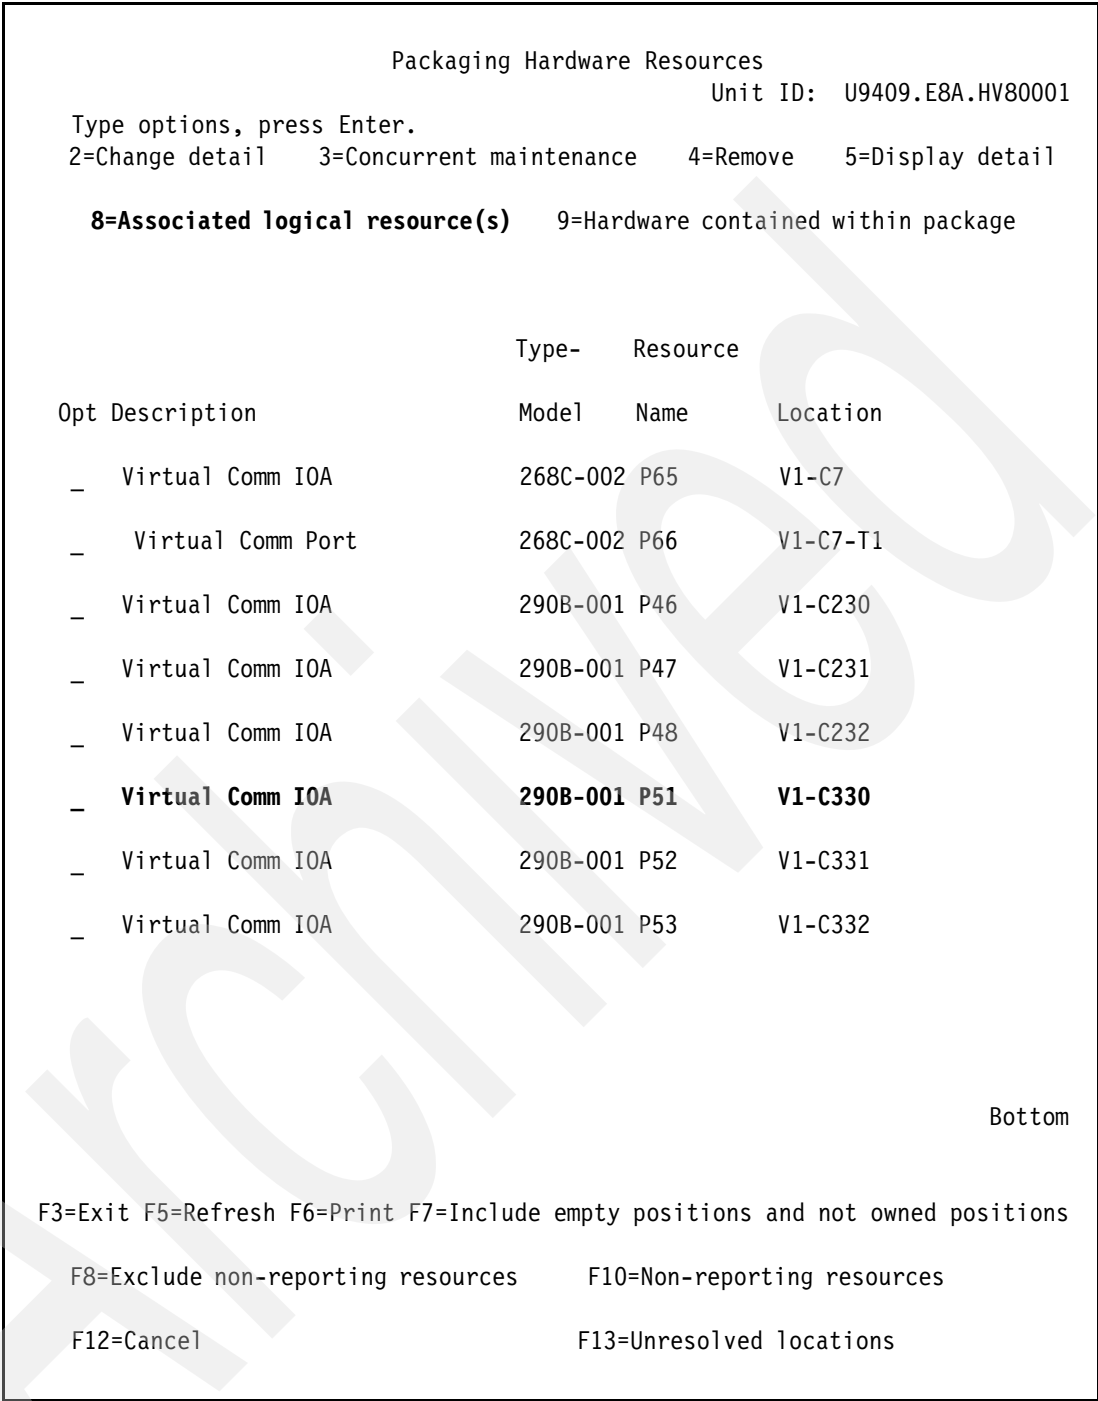

Figure 9 Packaging Hardware Resources panel - Locating the Virtual Comm IOA

14. Select option **8**, Associated logical resource(s), next to Virtual Comm IOA resource you identified in the previous step, and press Enter. The Logical Resources Associated with a Packaging Resource panel is displayed, as shown in Figure 10 on page 11.

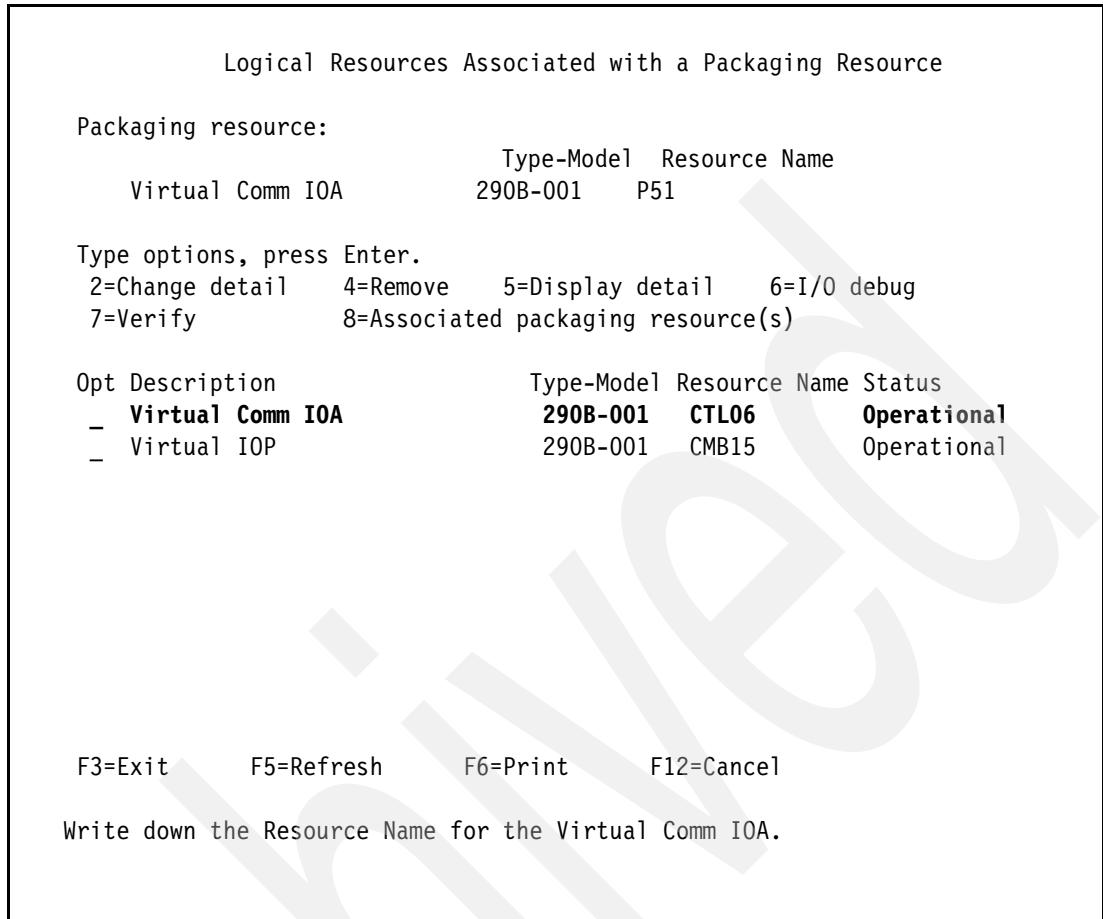

Figure 10 Logical Resources Associated with a Packaging Resource panel

15. Press F3 twice. Press F10. You will access the IBM i command line.
16. From the IBM i command line, type the command in Figure 11 to create a Network Server Description for the new IBM i guest partition.

```
CRTNWSN NWSN(XPF61) RSRNAME(CTL06) TYPE(*GUEST *OPSYS) PTNNBR(3)
RSTDDEVRSC(OPT01) IPLSRC(*PANEL) PWRCTL(*NO) TEXT(XPF61)
```

Figure 11 CRTNWSN command

**Note:** We are excluding OPT01 because we are going to use Virtual Media Images to install SLIC.

17. Press Enter. From the IBM i command line, type the command in Figure 12 to create a Network Storage Space for the new IBM i guest partition.

```
SBMJOB CMD(CRTNWSSTG NWSSTG(XPF61) NWSSIZE(35840) FORMAT(*OPEN)
OFFSET(*FORMAT) TEXT(XPF61)) JOB(XPF61) JOBQ(QSYSNOMAX)
```

Figure 12 CRTNWSSTG command

18. Press Enter. After the creation of the Network Storage Space finishes, from the IBM i command line, type the command in Figure 13 to link the Network Storage Space to the Network Server Description.

```
ADDNWSSTGL NWSSTG(XPF61) NWS(XPF61)
```

Figure 13 ADDNWSSTGL command

19. Press Enter. Assume that the Ethernet line description that is associated to the host partition is ETHLINE. From the IBM i command line type the command in Figure 14 to retrieve the Bridge Identifier.

```
CHGLINETH LIND(ETHLINE) + F4
```

Figure 14 CHGLINETH command

The details of the Ethernet line description are displayed, as shown in Figure 15.

```

Change Line Desc (Ethernet) (CHGLINETH)

Type choices, press Enter.

## The team who wrote this paper

This paper was produced by a team of specialists from around the world working at the International Technical Support Organization, Rochester Center.

**Matias Centeno Lozada** is a SW Support Specialist at the Latin America SW Support Center in Buenos Aires, Argentina. He joined IBM in July 2004 and has been in his current role for the last seven years. He has contributed to the Rochester Support Center with around 110 documents and four support tools. He has 22 years of experience working with AS/400, iSeries, IBM System i®, and Power Systems. He visited IBM Rochester five times to participate in the Maintenance and Technical (MTS) Systems Support Global Internship Programs. He also taught a seven-day workshop in IBM Chile, IBM Colombia, and IBM Venezuela with focus on i5/OS and IBM i (installation, upgrade, troubleshooting), and a three-day workshop in IBM Argentina with a focus on i5/OS and IBM i (Virtual Media Images). His

areas of expertise cover a wide range of topics including, but not limited to, Work Management, Security, APIs, MI, SLIC Macros, HMC, VIOS, and VPM. As a curiosity he owns two AS/400 9401-150s (Processors 2269 w/V4R5M0 & 2270 w/V5R2M0, respectively) that he uses for research and to improve his skills on AS/400 Machine-Level programming and PL/I.

**Hernando Bedoya** is a Senior IT Specialist at STG Lab Services and Training, in Rochester, Minnesota. He writes extensively and teaches IBM classes worldwide in all areas of DB2® for i. Before joining STG Lab Services he worked in the ITSO for nine years writing multiple IBM Redbooks® publications. He also worked for IBM Colombia as an IBM AS/400 IT Specialist doing presales support for the Andean countries. He has 25 years of experience in the computing field and has taught database classes in Colombian universities. His areas of expertise are database technology, performance, and data warehousing. He has a Master's degree in Computer Science from EAFIT, Colombia.

Thanks to the following people for their contributions to this project:

Ahmed Mansour  
IBM Software Engineer ECM for SAP, Egypt

Bob Jacobsen  
IBM GTS Service Delivery, Rochester MN Data Center

Jenifer Servais  
IBM Redbooks (ITSO Global Content Services), Rochester MN

Jiri Sochr  
IBM Delivery Center Central Europe, Brno, Czech Republic

Michael Harper  
IBM ANZ Techline, Australia

Tom Vernailen  
IBM MTS, Belgium

## Now you can become a published author, too!

Here's an opportunity to spotlight your skills, grow your career, and become a published author—all at the same time! Join an ITSO residency project and help write a book in your area of expertise, while honing your experience using leading-edge technologies. Your efforts will help to increase product acceptance and customer satisfaction, as you expand your network of technical contacts and relationships. Residencies run from two to six weeks in length, and you can participate either in person or as a remote resident working from your home base.

Obtain more information about the residency program, browse the residency index, and apply online at:

<http://www.redbooks.ibm.com/residents.nsf/ResIndex>

## Comments welcome

Your comments are important to us!

We want our papers to be as helpful as possible. Send us your comments about this paper or other IBM Redbooks publications in one of the following ways:

- ▶ Use the online review Redbooks form found at the following address:

<http://www.redbooks.ibm.com>

- ▶ Send your comments in an email to:

# Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

*IBM Director of Licensing, IBM Corporation, North Castle Drive, Armonk, NY 10504-1785 U.S.A.*

**The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:** INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

## COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs.
